DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins DOMAIN: The integrin I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-ABP repeats.

SIMILARITY: Contains 1 VWFA domain.

Integrins with I-domains do not undergo protease cleavage.
-!- SIMILARITY: Belongs to the integrin alpha chain family.
-!- SIMILARITY: Contains 7 FG-GAP repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Alternative splicing; Calcium; Cell adhesion;

Fathallah D.M. Sr., Zerria K. Jr.;
Submitted (MAY-2010) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).
-!- SIMILARITY: Belongs to the integrin alpha chain family.

Lee J.-K., Schook L.B., Rutherford M.S.;

Louditted (NOV-1995) to the EMBL/GenBank/DDBJ databases.

Submitted (NOV-1995) to the EMBL/GenBank/DDBJ databases.

-!- SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).

-!- SIMILARITY: Belongs to the integrin alpha chain family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 7 FGAP repeats.
SIMILARITY: Contains 1 VWFA domain.

It recognizes the sequence G-P-R in fibrinogen. It mediates cell-cell interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis.

Alpha-X associates with beta-2.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Predominantly expressed in monocytes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Proc. TISSUE SPECIFICITY: Expressed moderately on myelomonocytic cell
lines and subsets of peripheral blood leukocytes and strongly on
atherosclerolized cells, including macrophages from cells within
atherosclerotic plaques, and on splenic red pulp macrophages.
DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins
with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 7 FG-GAP repeats.
SIMILARITY: Contains 1 VWFA domain.

"The leukocyte integrin alpha D beta 2 binds VCAM-1: evidence for a
binding interface between I domain and VCAM-1.";
J. Immunol. 163:1984-1990 [1999].
-!- FONGTION: Integrin alpha-D/Deta-2 is a receptor for ICAM3 and
VCAM1. May play a role in the atherosclerotic process such as
clearing lipoproteins from plaques and in phagocytosis of blood-
borne pathogens, particulate matter, and senescent erythrocytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PRINTS; PRO0185; VINTERINA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                          Cloning of rat alpha D, a novel beta 2 integrin.";

Submitted (AUG-1997) to the EMBL/GenBank/DDBJ databases.

-- FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and VCAM1. May play a role in the atherosclerotic process such as clearing lipoproteins from plaques and in phagocytosis of bloodbare pathogans, particulate matter, and senescent erythrocytes from the blood (By similarity).

--- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D associates with beta-2 (By similarity).

--- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D companies in the process of similarity.

--- SUBUNIT: Heterodimer of an imparance protein (By similarity).

--- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D companies in the process of similarity.

--- SUBUNIT: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

--- SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. It is involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes (By similarity).

SUBUNIT: Hetrocimer of an alpha and a beta subunit. Alpha-L subccitlura Location: Type I membrane protein (By similarity).

SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.
